Job Application for Software Engineer

Dear Coalition Technologies,

About Me

I'm a full stack software engineer with 1 year of experience managing all aspects of the development process for a medium-sized startup. My current job is at **Windsor, Canada(Remote)**, where I am in charge of writing efficient and scalable RESTful API's in PHP and responsive Vue components for the web app. Currently building a subscription tracking web app from the ground up.

Why Coalition Technologies?

I'd love this position as full stack software developer because I know I have the skills to manage complicated projects and I'd like to do that for your company.

Why Me?

I'm a Computer Science Major, love to do programming and more specifically software development. I'm great at learning things or tech stack quickly. I'm passionate about this field. During my last project, I developed an online**subscriptions tracker** web app for a small startup, which we used to take control of user's subscriptions and be reminded before they hit their credit card. I know that your company is developing similar products, and I'd like to work with you on them.

Sincerely,

Fahad Bin Munir
